PROFESSIONAL SUMMARY

Computer Science graduate student at USC and former Bain Capability Network Associate with 3 years of experience spanning strategy consulting, AI, analytics, and software development. Led commercial due diligence, market expansion, and operational improvement initiatives while developing AI-powered decision support systems and data-driven solutions for investment and growth strategy.

EDUCATION

University of Southern California (USC) Master of Science in Computer Science	Jan 2025–Present CGPA: 3.71/4
Kalinga Institute of Industrial Technology (KIIT) Bachelor of Technology in Information Technology	Jun 2018–Jun 2022 CGPA: 9.19/10

TECHNICAL SKILLS

- **Strategy & Business:** Market Research, Commercial Due Diligence, Go-to-Market Strategy, Competitive Intelligence, Financial Analysis, Growth Strategy, Business Case Development
- **AI, Analytics & Data:** Machine Learning, LLM Applications, Geospatial Analytics, Predictive Modeling, NLP, Dashboarding, Data Visualization
- **Technology:** Python, SQL, React, TypeScript, MongoDB, PostGIS, Git, Tableau, Power BI

PROFESSIONAL EXPERIENCE

Research Assistant <i>University of Southern California, Los Angeles, CA</i>	Apr 2026 - Present
• Research hallucination attribution in medical Vision-Language Models for radiology report generation; synthesized 50+ papers to construct a source-based hallucination taxonomy • Designed an evaluation framework for identifying and attributing hallucinations in medical vision-language models, combining literature synthesis, experimentation, and explainability techniques	
Associate Analyst Intern <i>Bain Capability Network, Gurugram, India</i>	Jul 2022–Dec 2024 Jan 2022–Jun 2022
• Led commercial and operational due diligence analyses for 5+ private equity investments, evaluating market attractiveness, infrastructure value, competitive positioning, and growth opportunities across telecom sectors • Drove strategic cost optimization for Bain's flagship telecom product 'LUMI', supporting CAPEX/OPEX planning across 10+ global cases and delivering actionable insights in collaboration with leadership and partners • Built advanced models and tools (e.g., Broadband Market Scanner) to examine long tail of US broadband providers (200+), forecast fiber builds, and visualize competitive landscapes using demographic and secondary data • Evaluated network performance, R&M, energy efficiency, and rental costs for an APAC client, to provide insights and develop tool to reduce costs by a network cost transformation program determining RM 75M in savings (7.5% on AOP) • Optimised Alteryx workflows by root cause analysis to ensure smooth inter-team collaboration and resource load by 20% • Served a leading NA Telco to cooperate on market expansion strategies for wireless offerings, roughly evaluated attractiveness of 6M+ households by leveraging machine learning and data analysis to devise a cluster based expansion strategy • Innovated 'Likelihood To Switch' (LTS) metric, computing market attractiveness for Telcos looking for expansion by building new assets or improve existing offerings, metric was deployed as a capability across various (5+) cases	
Full Stack Developer Intern, CFO Tech <i>HighRadius, Bhubaneswar, India</i>	May 2021–Dec 2021
• Engineered full-stack features for enterprise finance software used by global customers, collaborating across frontend and backend systems to support product enhancements and business requirements • Improved engineering efficiency by 20% through automated validation and RCA tooling	

ACADEMIC PROJECTS

Lead Coder, Broadband Market Scanner , Los Angeles, CA	Feb 2026–Present
• Built a proprietary analytics platforms combining geospatial intelligence, market data, and predictive modeling to support investment screening and expansion decisions across 200+ broadband providers. • Developed LLM-powered planner-retriever-evaluator workflows with prompt optimization, retrieval tuning, and human-in-the-loop evaluation pipelines for 6 US census and market data	
Lead Coder, NetConnect AI , Los Angeles, CA	Dec 2025–Jan 2026
• Developed an AI-powered broadband recommendation platform using FCC datasets, React frontend workflows, and Python backend services • Implemented a ReAct-style agent integrating retrieval pipelines and Google Places APIs to generate contextual broadband insights across 5 markets
